

Transforming the front office of patient care facilities

MedicScan® is an easy-to-use scanning system that automates and speeds up the process of transferring images from medical cards into electronic forms. It increases productivity and reduces human error by automating the archiving process.

MedicScan® quickly and accurately captures the image of medical insurance cards from both sides* of the card. The captured image can be attached to the patient's electronic chart, saved to a file, or exported to various applications, emailed, and sent to an FTP.

Scanner

MedicScan® comes with a twain compatible A6 color scanner with a resolution of 600 DPI. The scanner connects to the computer's USB port, thus requiring no external power supply, and has small footprint.

Ease of use

The application is as easy as inserting the card into the scanner and MedicScan will do the rest!

Just insert the card into the scanner and watch how **MedicScan®** does all the rest!

In a matter of seconds, your medical card is scanned and ready to be saved to a file, exported to various applications, email or FTP.

*One or two scans, depending on the scanner.

Features

- **Fully automated scanning process:** Allows users to focus on chain-feeding media into the scanner, while image processing and data extraction take place automatically in the background.
- **Automatic page-feed detection:** Launches the scan job immediately upon the insertion of a document into the scanner.
- **Extensive export capabilities:** export to various applications, email or FTP.
- **Image auto alignment:** Automatically corrects incorrect card insertion.
