Updated Version of IdScan Includes Business Card Reading

Los Angeles, CA (January 06, 2005)—What do you do when your product line already features the only identification card scanners capable of scanning licenses from all 50 states with the highest accuracy? If you're Card Scanning Solutions based in Los Angeles, CA, you use your revolutionary technology to allow accurate scanning and processing of business cards, creating a multifunctional business tool that comprehensively fulfills a wide range of information-gathering needs.

The IdScan Driver's License Card Scanner is already recognized worldwide as the only card scanner on the market with capabilities in reading the various and newest versions of licenses from all 50 states, as well as all government-issued cards and selected international identification cards. With the newest version of the software, one of the newly added features includes the automatic detection of both driver's licenses and business cards. For end-users, this means that the compact IdScan is a valuable means of extracting client, visitor or associate information for loyalty/customer management programs, networking or security purposes. For software developers, since the Idscan is an integration module, this business-card scanning functionality can be integrated into 3rd party database programs for a powerful information gathering/retention system.

An included functionality is the automatic size detection of the document—simply place an identification card or business card into the scanner, and the scanner automatically detects the document size and crops the image accordingly.

While the IdScan has long been a leader in the industry in scanner accuracy, range and cost-efficiency, its added functionality of business-card reading now brings an added versatility that makes it an integral and invaluable tool in any operation that requires information gathering.

About Card Scanning Solutions

Card Scanning Solutions is the leading developer of identification card scanners. Its product line, including the IdScan, Scanshell Pro OCR and Swipescan, is used by top security and government agencies, credit unions, casinos, hotels and automotive dealers around the world. Recognized for its cutting edge technology, it assimilates high product accuracy, cost efficiency and the ability to improve customer service applications while reducing losses due to fraud. Card Scanning Solutions is the go-to choice of the major industries for enhanced identification services in the post 9/11 era.
