

Card Scanning Solutions Announces Integration of Scan2CRM® With Interprise Suite by Interprise Solutions, Advancing Contact and Customer Management Solutions

CSSN Inc. dba Card Scanning Solutions recently announced the integration of their Scan2CRM® software solution with Interprise Suite, a revolutionary application from Interprise Solutions. The core focus of both CSSN and Interprise Solutions is to offer cutting edge and easy-to-use solutions which contribute to the efficiency and accuracy of processes and procedures in a wide variety of industries.

Los Angeles, CA ([PRWEB](#)) December 02, 2011 -- Card Scanning Solutions (CSSN Inc.) is a leading image processing and Optical Character Recognition (OCR) software company. With their advanced OCR technology, CSSN is able to program their software to read any printed media and to deliver the extracted data into most existing applications. Their software also provides automatic data export capabilities as well as extensive database capabilities for processing, sorting and archiving. This advanced technology enables CSSN to offer superior Contact Management Solutions to a broad range of customer types.

Interprise Solutions is a privately held company that was founded in 2004 with a mission to provide an affordable application to the Small to Midsized Enterprise (SME) market. Not only do they combine the features of ERP, CRM and Accounting applications, but that can also take advantage of new technology that allows a normal desktop application to run over the internet like a browser application. The result of this vision was the development of Interprise Suite, a comprehensive computer application that is able to run an entire business.

With the Interprise Suite, information that is entered in one area such as, inventory is available in other areas such as, a web store, and so there is no need for the pulling and pushing of data. The Scan2CRM® from CSSN is an add-on scanning system that integrates seamlessly with the Interprise Solutions application. With CSSN's comprehensive [OCR SDK](#) (Software Developer Kit), Interprise Solutions has been able to easily incorporate this reading technology directly into their existing software application. This means that you can now scan a business card and the Scan2CRM® software automatically inputs both their textual data and image into a new contact record in the Interprise Suite application. Since the Scan2CRM® for Interprise Solutions works directly from within the Interprise Suite, you do not need to scan business cards into a 3rd party application before the information can be imported into the Interprise Suite.

The Scan2CRM® for Interprise Solutions comes bundled with CSSN's ScanShell® 800NR business card reader. Within seconds of placing a card into the [ID scanner](#), the software solution automatically opens and populates the text fields of a new contact record in the Interprise Suite together with an image of the card. The mobile color A6 ScanShell® 800NR scanner is twain compatible with a USB 2.0 high speed interface, thus requiring no external power supply.

"A state-of-the-art CRM system is a pivotal element of any growing organization" said Celeste Monzon, Sales and Marketing Manager of Card Scanning Solutions. "Our goal is to provide affordable, easy-to-use software that is easily integrated into existing applications to enhance the speed, functionality and efficiency through automation."

By integrating the Scan2CRM® and the ScanShell® 800NR [business card reader](#) from CSSN with the Interprise Suite from Interprise Solutions, the ERP (Enterprise Resource Planning) demands of a company are easily addressed. The benefits also include a major savings on data entry personnel, accuracy, reliability, time and efficiency. Since Interprise Solutions offers the ability of accessing your data from your local area network (LAN) or across the web, their application with the integration of Scan2CRM® will increase the operating efficiency and profitability of supply chain, distribution, ecommerce and other product related companies. No matter where your staff is located around the world, this solution offers the ability to work together as if they are located under one roof.

Additional information on the image processing solutions offered by CSSN, Inc. can be found at www.card-reader.com
